

Introducing Cryo 21

Harness the power of cold

Cryo 21 uses the well-known benefits of cold therapy to reduce fat cells as well as healing and renewing skin.

Cryo 21 lipolysis is designed to enable the fats to be attacked in a programmed and selected way. Its a precise determine temperature used through a flat metallic plate fitted to a handle.

Adipose tissue or fat is a term for loose connective tissue composed of adipocytes. Its role is to store energy in the form of fat and also cushions and insulates. This treatment will help to achieve tone and definition. It works by creating a thermal shock to permanently remove the fat cells via a process called apoptosis.

The tissue is massaged as the temperature of the tissue is reduced this acceleration of the bodies natural process digests the redundant cells by revitalising the lymphatic system and improves the vascular system.

From the first application, results are visible, measurable and long-lasting. This means it has commenced and stimulated the natural process and will continue days after the actual treatment.

The number of sessions will be dependent on the extent of the beauty problems.

We can treat almost any part of the body or face by passing a cold probe manually over the area. Fat cells are more sensitive to cold than surrounding area. When freezing the area it goes under a process called Apoptosis (cell death).

Cryo is FDA and CE approved, offering a safe and harmless non-invasive treatment.

Fat freezing can only be every 2 weeks

Courses and costs are arranged by you clinician
